I counted 340 white beans. They have a mass of 80 grams. The average mass of one white bean is $80 / 340 = 0.235$ grams. Find the isotopic abundance (% of beans) for each isotope by dividing the number of atoms of one isotope by the total number of atoms (black, brown, plus white) and multiplying by 100%. Record on the data table to the nearest 0.1%.

Beanium Lab - Anderson High School

The effect of bean type on the choice and amount of eggs laid by female bean beetles Keywords: Bean beetles, oviposition, black beans, adzuki beans, and mung beans Jenna Bakir 2/24/ BIO2 152 L ABSTRACT Bean beetles oviposition behavior is dependent on the nutrition value of the vessel (bean) and resources available.

Final Lab Report On Bean Beetles - BIO2 152 - VCU - StuDocu

Conclusion The lab was done in order to observe the movements of two of the same species (beans) with different coloration: black and brown. This is done so there can be accurate estimations done based on population size. We did this by catching and then marking and recapturing individuals in the species of the different varieties. In order to test the population size, we
