In numerical analysis, hill climbing is a mathematical optimization technique which belongs to the family of local search.It is an iterative algorithm that starts with an arbitrary solution to a problem, then attempts to find a better solution by making an incremental change to the solution. If the change produces a better solution, another incremental change is made to the new solution, and ...

### Hill climbing - Wikipedia

For the past several decades, numerous non-government organizations (NGOs) have used the process of monitoring and evaluation (M&E) to track the progress of programs. Likewise, organizations such as the United Nations and the World Bank have embedded M&E into their organizational processes to improve performance. But only recently have organizations of all types begun using M&E to manage projects.

### results-based monitoring and evaluation of projects
