The train-test split procedure is used to estimate the performance of machine learning algorithms when they are used to make predictions on data not used to train the model. It is a fast and easy procedure to perform, the results of which allow you to compare the performance of machine learning algorithms for your predictive modeling problem.

Train-Test Split for Evaluating Machine Learning Algorithms

Before learning how to crate train a puppy, we should first be clear on what crate training truly is. It's the process we go through to teach our puppy that their crate is a special happy place all of their own, a place where only good things happen, so they become willing and even look forward to spending calm, relaxed time there.

How To Crate Train a Puppy: Day, Night, Even If You Work ...

However, every accident inside takes your potty training a step back, and if you want to potty train your puppy quickly it's best to never let them have the opportunity to go inside, so it's best to stay a step ahead. If you take your puppy out every 20 minutes and they don't go, then you can bump it to every 30 minutes.
