Beginners' XHTML Tutorial / training / guide free and ...

XHTML was developed to make HTML more extensible and flexible to work with other data formats (such as XML). In addition, browsers ignore errors in HTML pages, and try to display the website even if it has some errors in the markup. So XHTML comes with a much stricter error handling. If you want to study XML, please read our XML Tutorial.

HTML Versus XHTML - W3Schools

When writing XHTML documents, you will be making heavy use of tags. These are used to do virtually everything in the webpage. In XHTML, they must always be written in lower case. Tags are always between < and >. The most basic tags are those that define the structure of the website. The first tag you want in a website is <html>. This states when the document begins.
